ABSTRACT:

PROBLEM TO BE SOLVED: To provide a device and a method in order to supply the information at a site, to manage and update continuously the site information at a 1st access point and to supply a multilevel access to the site information at a 2nd access point.

SOLUTION: An internet information device includes a web site 12 which is connected to the 1st and 2nd user internet points 14 and 16 respectively. The point 14 supplies the multilevel management information to the point 12, and the point 16 supplies a multilevel user access to the management information. Then a selected password supplies the user access to all management information, and another selected password supplies the user access to a limited part of the management information.
